Abstract:

The present invention relates solid dispersion formulation of Sulfamerazine and fast -dissolving tablet of Solid dispersion formulation of Sulfamerazine. The drug formulation and the tablet described herein showed increased solubility and bioavailability of the drug.

Complete Specification

The present study relates to the field of chemistry particularly preparation of solid dispersion formulations comprising sulfamerazine

BACK GROUND OF INVENTION

The goal of any research in the field of pharmaceuticals is to serve the need of society by developing a suitable dosage form that has high safety and efficacy with minimum undesirable effects. The technology permits economic, reliable and reproducible large- scale production methods without the need for new and expensive specialist equipment.

Solubility is an important parameter for the oral bioavailability of poorly soluble drugs. Dissolution of a drug is the rate determining step for oral absorption of the poor water-soluble drugs which can affect the in-vivo absorption of drugs. Because of solubility problem of many drugs the bioavailability gets affected and so solubility enhancement becomes necessary. Solid dispersion technology is one of the possible methods that increase the solubility of poor soluble drugs. The various technologies discussed have been successful in the laboratory as well as the scale-up.

Sulfamerazine is sulfa drug used widely as the preventive and therapeutic compounds against various bacterial infections, such as urinary tract infections, eye infections, actinomycosis infections, meningitis, and influenza. Sodium salt of Sulfamerazine are soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide which

Abstract:

The present study discloses a composition of Withania somnifera and 5- hydroxydecanoate (5-HD) composition against strychnine-induced convulsion and strychnine-induced mitochondrial dysfunction in the pre- frontal (PFC) of the animals.

Complete Specification

The present invention relates to a biotechnology, More particularly the invention relates to a composition of Withania Somnifera extract and 5-hydroxydecanoate (5-HD) mitochondrial ATP sensitive potassium channel inhibitor.

BACKGROUND

Epilepsy is a chronic noncommunicable disease that affects brain. Around 50 million people are suffering from the disease worldwide. One seizure does not signify epilepsy (up to 10% of people worldwide have one seizure during their lifetime). Epilepsy is defined as having two or more unprovoked seizures. It is characterized by recurrent seizures, which are brief episodes of involuntary movement that may involve a part of the body (partial) or the entire body (generalized) and are sometimes accompanied by loss of consciousness and control of bowel or bladder function. The word "epilepsy" does not indicate anything about the cause of the person's seizures or their severity. Many people with epilepsy have more than one type of seizure and may have other symptoms of neurological problems as well. Characteristics of seizures vary and depend on where in the brain the disturbance starts, and spreads. Temporary symptoms occur, such as loss of awareness or consciousness, and disturbances of movement, sensation (including vision, hearing and taste), mood, or other cognitive functions.

People with epilepsy tend to have more physical problems and higher rates of psychological conditions, including anxiety and depression. Similarly, the risk of premature death in people with epilepsy is up to three times higher than in the general population, with the highest rates of premature mortality found in low- and middle-income

Abstract:

The present invention is a method of making a sustainable concrete free of Portland cement comprising the following steps: Selecting and weighing a slag and Calcined clay wherein the slag and clay are in proportion of 80:20, 50:50 and 20:80;alkaline activator was made using NaOH and sodium silicate solution further consisting of a mix of 12 M concentration NaOH and Na₂SiO₃ solutions prepared by diluting Na₂SiO₃ with 12M NaOH solution at silicate to hydroxide ratio of 2.5; the mixed solution was then left for 24 hours before using it as a concrete activator; Casting was then done using the Cube moulds of size 15cm x 15cm x 15cm, cylinder moulds of size (dia. x height) 15cm x 30cm and beam moulds of size 15cm x 15cm x 70cm;Testing for strength; wherein a maximum compression strength of 51.2MPa was obtained for G80C20 (80% GGBS and 20% Calcined clay), a tensile strength increased by around 53.7%, flexural strength increased by 35.7% respectively after 4 weeks for G80C20 and UPV values were highest for G80C20 samples which are due to the increased density of the mix and filling of the voids.

Complete Specification

The present invention relates to Geopolymers and more specifically to a sustainable concrete developed using GGBS and calcined clay (CC).

BACKGROUND OF THE INVENTION

Portland cement serves as the binding agent in normal concrete. Cement manufacture is a high-energy and resource-intensive operation. About 1.5 tons of raw materials are estimated to produce 1 ton of cement, while the manufacture of 1 ton of this binder produces almost equivalent extent of CO₂ in the environment. The generation of this greenhouse gas is an important concern in terms of sustainability. Numerous researches have been performed with the goal of decreasing cement usage by substituting waste materials. Many studies have been conducted with the aim of decreasing porosity and permeability in concrete. In this regard, Davidovits' Geopolymer technology provides an approach to replace cement in concrete. Geopolymers are a unique type of polymer formed when alumino silicates are combined with sodium/potassium silicate and their hydroxide solutions. Ground granulated blast furnace slag (GGBS) is an excellent alumino-silicate material because of rich silicon dioxide and aluminum oxide content, both of which are required for the reaction of geo-polymerization to occur.

Ordinary Portland Cement (OPC) is used as the conventional binding material in concrete. OPC manufacturing is a highly energy intensive process which involves intensive fuel consumption for clinker making and results in emission of greenhouse gases like carbon dioxide (CO₂) in large quantities and other tracers like methane (CH₄), the main causes of global warming. In general, OPC production process produces about single ton of CO₂ for each single ton of OPC produced and is therefore responsible for about 5-8% of global CO₂ emissions. This environmental problem will most likely be increased due to exponential demand of OPC

[View Application Status](#)

Complete Specification

The present invention relates to the power generation. More particularly, the inertia based power generation plate that produces power without consuming the extra energy from the vehicles.

Background of the Invention

In large cargo vehicles there's a dynamo which generate electricity to charge in fitted battery, although it consumes some energy which reduces the efficiency.

CN102108949B discloses an inertia power generation device for a motor vehicle, which comprises a seat, a motor vehicle chassis base, a controller, a thrust recovery device, a hydraulic storage device and a hydraulic power generation device, wherein the thrust recovery device is fixed on the chassis base of the motor vehicle and is in dynamic fit connection with the seat; the thrust recovery device has a hydraulic suction oil cylinder which is connected with the hydraulic storage device; and the hydraulic storage device is connected with the hydraulic power generation device in which a charging device and a storage battery are arranged. The thrust recovery device is used to recover the inertia thrust of the running vehicle and convert the thrust into the pressure of hydraulic oil, the hydraulic oil is used to drive a hydraulic motor to generate power, and thus, energy waste is reduced, and energy conservation and emission reduction are promoted.

US3153735A discloses a magnetic inertia generator capable of delivering a large electrical voltage output due to a small mechanical force and in which the electrical output is independent of mechanical displacement of a magnetic keeper as a function of time.

US3035520A discloses an improvement in an inertia type electric generator and switch unit for energizing a known electric circuit and in which the generator and switches are to energize the circuit whenever subjected to a particular set of conditions and are not to be affected by any other set of conditions.

Abstract:
 The present invention relates to a churning machine which is easily maintainable thereby making the churning process convenient. The machine is provided with a churning machine provided with a spindle that can be washed and replaced easily. Also the total time taken to churn milk and obtain butter is also reduced considerably

Complete Specification

The present invention relates to the churning machine for milk to reduce the time taken for churning milk and obtaining butter.

BACKGROUND OF THE INVENTION

Churning is the process of shaking up cream or whole milk to make butter, usually using a butter churn. In Europe from the Middle Ages until the Industrial Revolution, a churn was usually as simple as a barrel with a plunger in it, moved by hand. These have mostly been replaced by mechanical churns.

Butter is essentially the fat of milk. It is usually made from sweet cream (that is, cream skimmed from milk rather than whey). However, it can also be made from acidulated or bacteriologically soured cream. Well into the 19th century butter was still made from cream that had been allowed to stand and sour naturally. The cream was then skimmed from the top of the milk and poured into a wooden tub.

Butter making was done by hand in butter churns. The natural souring process is, however, a very sensitive one and infection by foreign microorganisms often spoiled the result. Today's commercial butter making is a product of the knowledge and experience gained over the years in such matters as hygiene, bacterial acidifying, and heat treatment, as well as the rapid technological development that has led to the advanced machinery now used. The commercial cream separator was introduced at the end of the 19th century, the continuous churn had been commercialized by the middle of the 20th century. The prior art device, invented by Alfred Clark, consisted of a barrel attached to a rocking chair. While the rocking chair moved, the barrel moved and churned the milk within minutes into butter.

Abstract:
 The present invention discloses an artificial intelligence (AI) based defects detection system for functional building infrastructures comprises of a cloud server (1), a deep CNN units (Inception V4) (2), an IOT Device (3), a UAV with high resolution camera (4), and a media device (5) for report receiving; where the Unmanned Aerial Vehicle (UAV) (4) will capture the image from site and that image will be uploaded to the cloud server (1); thereafter that image will be retrieved from cloud (1) and resize to 224x224 pixels; further, data labelling will be performed and feed to the Inception V4 deep CNN unit (2), the training and testing will be performed by dividing the dataset into 80% and 20% respectively; finally, the weight of the model will be utilized to predict the new image captured from the UAV (4) and if the system detects a defect than a signal will be sends to an IOT device (3); the IOT device (3) will trigger a signal and a message will be send to the mobile (5) of the concern person.

Complete Specification

Description: ARTIFICIAL INTELLIGENCE BASED STRUCTURE DEFECT DETECTION SYSTEM

Field of Invention
 The present invention relates to a structure defect detection system. More particularly, a structure defect detection system that is based on artificial intelligence (AI).

Background of the Invention
 As our culture and economy have progressed, the scope of infrastructure building has grown, and concrete has been used in a variety of projects. It is inevitable that structures built for public use over the course of a lifetime will degrade to the point that they are no longer capable of performing their intended duties. Concrete defects are a major problem in facilities, and despite the fact that people have improved the detection strength of facilities, buildings must be blocked off during field detection. Meanwhile, physical labour on the exterior of a large-area structure has low detection capability, and detection is difficult to carry out in a timely and efficient manner when faced with a large number of basic facilities.
 Cracks, crazing, freezing-thawing, blisters, spalling, and other problems in construction have been seen in a variety of building types. A significant portion of all faults in the built environment may be attributed to errors in the construction process. In addition to errors in the building process, degradation of any structure is also caused by age and wear and tear. For any structure to last, it must be identified and repaired as soon as possible. Even though different methods and technologies, from manual detection to mechanical detection, have been used in the past, they are ineffective due to the energy, time, cost, and efficiency of these procedures.

Abstract:

ABSTRACT PROCESS OF FORMULATING MEDICAL GRADE ALCOHOL FROM MADHUCA LONGIFOLIA The present invention relates to a process of formulating medical grade alcohol from Madhuca longifolia flowers (Mahua) through submerged fermentation using 0.2% yeast inoculums and ammonium dihydrogen orthophosphate (0.2%, w/v) at temperature 30± 2 0C for 6-15 days to obtain 80-95% of pure ethanol, wherein said ethanol can be used as sanitizer, medical alcohol and spirit.

Abstract:
 The present invention relates to A herbal composition against ethidium bromide (EB) induced chronic neurodegenerative disorder in rats comprising therapeutically effective amount of Ocimum basilicum (OB) and Ursolic acid (UA), wherein the neurodegenerative disease or disorder is multiple sclerosis, pre-frontal cortical neuroinflammation, astrogliosis and mitochondrial dysfunction.

Complete Specification

The present invention relates to pharmaceutical field, which aims at developing a formulation comprising Ocimum basilicum Linn. (Family Lamiaceae; OB) and Ursolic acid (UA). More, particularly, the invention relates to a composition of the plant OB and Ursolic acid (UA) and their pharmacological significance of against Multiple sclerosis and ethidium bromide-induced cognitive deficits and pre-frontal cortical neuroinflammation, astrogliosis and mitochondrial dysfunction in rats.

BACK GROUND:

Sweet Basil, is an herb in the Lamiaceae (mint) family native to the tropical regions of Africa and Asia. The fragrant edible leaves are great in soups, stews, and other meat dishes. Sweet basil prefers full sun and moist, well-drained soils. It is easily transplanted and should be done so after the last frost. Prune by pinching the tips of long stems and any flower buds. This promotes a branching bushy form. OB contains a wide range of bioactive compounds, such as flavonoids, terpenes, ellagitannins, etc. It is a component of several food supplements, which are easily accessible as products able to maintain and promote health. They are sold over the counter and highly accepted by consumers. OB is reported to have therapeutic activity against neurological disorders such as depression, anxiety and sedation. It is also suggested that the therapeutic effects of OB is mostly due to its anti-inflammatory and anti-oxidant property.

Ursolic acid (3 β -hydroxy-urs-12-en-28-oic acid) is a pentacyclic triterpenoid widely distributed in the plant kingdom in free form or as aglycons of triterpenoid saponins linked to one or more sugar residues. Ursolic acid is found in apple peel, cranberries, bilberries, basil, rosemary, lavender, peppermint, and thyme, whereas oleanolic acid is

Abstract:

The present invention discloses a portable low tunnel polyhouse for crop cultivation, which make the system suitable for off season nursery raising and crop production in low temperature as well as in high temperature conditions. the present portable low tunnel polyhouse for crop cultivation (1) comprises of Iron rod (2), motor (3), roller (4), and base frame (5) where the Iron rod (2) provides the support to LDPE and provides the structure of frame; the motor (3) automatically moves the roller (4) and roller rolls over the polythene covering around the frame structure (5).

Abstract:

The present invention relates to a device (100) to generate power by swinging disc of fitness machine during workout. The device comprising a frame(102). The frame (102) having a cylindrical pipe(114) associated with a bottom base platform and a supporting post at the center of the bottom base platform of the frame (102). The device further comprising a rectangular handle (112) configured horizontally with top of supporting post of the cylindrical pipe(114). The device(100) further comprising a circular disc (116) having a pedestal bearing (106) coupled with a first wheel (110) and a second wheel(108).The circular disc (116) engaged with the cylindrical pipe (114) of the frame(102).The device (100) further comprising a rectangular cuboidal structure (104) with base platform (118) of the circular disc(116), wherein the base platform (118) allowing a movement of the circular disc (116) with said two degrees of freedom. The circular disc (116) is adapted to rotate with the base platform (118) to generate rotary motion. The device(100) further comprising a display board to display the power generation by rotary motion.

Complete Specification

The present invention relates to a device to generate power by swinging disc of fitness machine during workout. Most particularly it is a structure with a power generation mechanism for generating electricity by burn calories of waist-twisting exercise effect.

Background of the Invention:

Generally, the "waist twist machine" is a fitness device by which the user may twist his waist and his abdominal muscles to achieve the unique exercise effect. At present, the conventional similar devices almost employ a rotating disc as a structural basis on which a user stands to apply force for its rotation. In use, the user has to hold a fixed handle with his both hands so that his upper body is positioned at a certain angle. At this point, the user twists the lower part of his body to the left and right side. In this way, the fitness exercise of the waist and the abdominal part is achieved.

Generally, many of the existing designs provides for only burning of calories during exercise of waist twist machine without useful conversion of energy. The existing waist twist machine use as an exercise equipment for only bodybuilding. The calories burning during bodybuilding is waste without any other use.

However, the weak point of existing these waist twisting machines is waste the burning calories while doing exercise. The people burn a lot of calories without useful conversion. Further, there is no such type of setup is available for the power generation during workout or gym. Further, the existing waist twisting machines are costly and

Abstract:

The present invention disclose an arthritic composition *Sesbania grandiflora* and MMP-3 inhibitor that significantly decrease the arthritic index.

Complete Specification

The present invention is related in general to the field of dietary supplements and therapeutic compounds. In particular, the present invention relates to formulations comprising herbal extracts for the amelioration of arthritis and for the alleviation of inflammation and pain associated with arthritis.

BACKGROUND OF THE INVENTION

Arthritis is a disease affecting the musculoskeletal system, particularly the joints. It is not a single disease but actually an umbrella term for over 100 medical conditions where the joints are affected. According to the Arthritis Foundation, arthritis afflicts more than 70 million adults and 300,000 children in the United States alone.

One form of arthritis is rheumatoid arthritis (RA). RA is a systemic disease that affects the entire body and is one of the most common forms of arthritis. RA is a chronic inflammatory and destructive joint disease that affects 0.5~1.0% of the population in the industrialized world and commonly leads to significant disability and a consequent reduction in quality of life. It is two to three times more frequent in women than in men and can start at any age, with a peak incidence between the fourth and sixth decades of life. RA is associated with high costs and, if not treated appropriately can result in reduction of life expectancy. In addition to the joint swelling and pain caused by the inflammatory process, extra-articular involvement, which ranges from rheumatoid nodules to life threatening vasculitis, is a characteristic of RA. The ultimate hallmark of RA is joint destruction.

[View Application Status](#)

Complete Specification

The present invention relates to an emergency window allowing escape from a multistorey building. Most particularly it is an emergency which is converting the window into ladder.

Background of the Invention:

In modern time there are many multistorey buildings which give a luxuries life to people. But every year thousands of multistorey buildings catch fire due to a variety of causes. In many of these fires the occupants of the multistorey buildings are injured, with many of these injuries resulting from the non-availability of a ladder with which the occupants of the building may exit from upper levels of the structure. The injuries may result from heat exhaustion, smoke inhalation, or may be the result of a person jumping from an upper window or ledge of the house to avoid the fire.

Generally, many of the existing designs provides a protective window on the house sidings at present, part has been reserved the emergency escape hole, and part is made into gate-type, all closes with lockset at ordinary times, opens lockset when emergent and pushes open and form the emergency exit. Be not difficult to find out.

However, the weak point of existing these protective windows is, though when emergent, can push open to do the emergency exit, because the stair that do not get off from the emergency exit. The people make when need flee from multistorey buildings under emergency situations such as fire, noison, gas leakage. Further, they still need

Abstract:

The present subject matter relates to a formulation of sumatriptan succinate loaded chitosan solid lipid nanoparticles for brain targeting. Formulation of sumatriptan succinate loaded chitosan solid lipid nanoparticles comprises Sumatriptan succinate, chitosan, tripalmitin, soya lecithin, polysorbate 80 in a specific ratio. Further the present invention relates to a method of formulation of sumatriptan succinate loaded chitosan solid lipid nanoparticles for brain targeting. The chitosan solid lipid nanoparticles containing sumatriptan succinate were formulated by solvent injection method with minor modifications using ethanol as the organic solvent.

Complete Specification

Claims:

We claim:

1. A nasal formulation for treating migraine comprising sumatriptan succinate loaded chitosan solid lipid nanoparticles; wherein sumatriptan succinate loaded chitosan solid lipid nanoparticles comprises sumatriptan succinate, chitosan, tripalmitin, soya lecithin, polysorbate 80 in a specific ratio.
2. Nasal formulation for treating migraine as claimed in claim 1; wherein sumatriptan succinate loaded chitosan solid lipid nanoparticles comprises sumatriptan succinate, chitosan, tripalmitin, soya lecithin, polysorbate 80 in a ratio of 1:1:1 or 1:1.5:1 or 1:2:1 or 2:1:1, preferably 1:1:1.
3. Method for preparation for nasal formulation for treating migraine involves; preparing solid lipid nanoparticles by solvent injection method by using an organic solvent; adding aqueous phase to lipid phase with stirring at specific rpm to obtain final product.
4. Method for preparation as claimed in claim 3: wherein organic solvent may be selected from methanol, ethanol or propanol, preferably ethanol.

Abstract:

The present invention discloses the use of waste foundry sand (WFS) in concrete mixture in the place of natural sand that helps for improving the strength and durability properties of concrete. In the present invention the waste foundry sand and Polycarboxylic ether based super plasticizer are prepared by using the cement (1), fine aggregate (2) and coarse aggregate (3). The fine aggregate (2) (Natural sand), foundry sand (4) and coarse aggregate (3) are first mixed in a pan mixer (5) with small quantity water (6) for around two minutes in order to minimize dust due to mixing of aggregate in pan mixer (5). After that the required quantity of cement has been added and the mixing is continued for next two minutes. The mix is then casted into the desired moulds (7).

[Complete Specification](#)

Description: USE OF WASTE FOUNDRY SAND IN CONCRETE MIXTURE

Field of Invention

The present invention relates to waste foundry sand (WFS) in concrete mixture. More particularly, the use of waste foundry sand in concrete mix in the place of natural sand that helps for improving the strength and durability properties of concrete.

Background of the Invention

Around the globe, the ferrous and nonferrous metal casting industries create several million tons of waste as a byproduct. Waste foundry sand is generated in large quantities in India, with around 2 million tons produced each year. WFS are a significant byproduct of the metal casting industry that has been utilized as a land fill material for many years with great success. However, because of the fast rise in the expense of disposal, the use of waste foundry sand (WFS) for land filling is becoming a challenge CN101376579A discloses a dry powder mortar of stone dust, which is characterized in that the dry powder mortar of the stone dust is mainly formed by cement, fly ash, yellow sand, stone dust or mortar thickening powder. The invention initially takes the stone dust as the raw material of the dry powder mortar, and the mechanical property of the stone dust in the mortar is more excellent than the yellow sand, thereby changing waste into valuables. The invention is economical and environment-friendly. CN102701681A relates to a waste foundry sand dry-mixed mortar, belonging to the technical field of circular economy and building material mortar. The waste foundry

Abstract:
 The present invention relates to a system that (100) that performs sentiment analysis on the code-mixed bilingual languages comprising Universal Sentence Encoder (USE) module (101); Transformer encoder (XLM-R) module(102); and Ensembler module(103) that efficiently generates a meaningful data from the various social networking website to gather the feedback of the users in a bilingual language preferably Hindi and English.

Complete Specification

The present invention relates to a computer science, particularly to the data mining and application of the sentiment analysis on the text written in two languages.

Background of the Invention:

Sentiment analysis, or opinion mining is "the field of study that analyses people's opinions, sentiments, evaluations, appraisals, attitudes, and emotions toward entities such as products, services, organizations, individuals, issues, events, topics, and their attributes (B Liu, 2015; DOI:10.1017/CBO9781139084789).

Social media is an huge platform for gathering feedback, opinions, statistics of the user in a large number of field. The data generated however is enormous and user-generated social media data makes is difficult to manually analyse the data. The term used for this huge date generated is Social Media Big Data. These data are generated in all possible formats, including textual data, pictures, videos, sounds, and geolocations. Social Media Big Data. can be divided into unstructured data and structured data. In social networks, the textual content is an example of unstructured data, while the friend/follower relationship is an example of structured data. The natural language processing (NLP) and the increasing computing capability to process big data, is being used to efficiently analyse large volumes of free-text data with minimal manual effort. Sentiment analysis, in particular, has received increasing attention in this context.

One of the major challenges to analysing sentiments embedded in social media data is due to their unique characteristics such as frequent use of short text, informal expressions and layperson terms for medical concepts, and special communication gimmicks such as hashtags and emojis.

Reading text and realizing the feelings and emotions is normal for humans, but when it comes to read bulk messages , post or comments then the process gets difficult. Sentiment Analysis is task in Natural Language Processing that is in interest of whole industrial community. The Aspect Based SA, multimodal SA, and many others

Abstract:
 The present invention discloses a smart washing machine (8) that is controlled through an IR remote (6) from anywhere. In the present invention when the next button on the remote (6) is pressed, motor (7a) will rotate in clockwise direction; if the previous button is pressed motor (7b) will rotate in anticlockwise direction; the motors (7a, 7b) can be controlled individually using left, right arrow buttons and stop button is used to stop the rotation.

[Complete Specification](#)

The present invention relates to a smart washing machine. More particularly, a remote or mobile controlled smartwashing machine.

Background of the Invention

Washing machine is an important household need. Smart technology often allows you to start and stop your appliances from your remote. In an ordinary semi-automatic washing machine timer switch and drain switch could be damaged with the time. Also, the person has to be present near the washing machine to control its functioning. WO1997010376A1 discloses a smart laundry system including a tag communicating device for reading laundering instructions and water processing information contained in an electronic tag (22) attached to a material item (20) while the material item (20) is within a laundry machine. A controller controls the laundry machine in accordance with the laundering instructions. A water processing system processes waste water produced by the laundry machine in accordance with the water processing information to form gray water for use in a subsequent wash. The electronic tag (22) maintains a count of the number of laundrings of the material item (20). An automatic folding and sorting machine (30) folds and sorts the material item (20) based upon folding and sorting instructions stored on the electronic tag (22). A tag programming device (24) is used to identify, locate, query, and program the electronic tag (22). US5156025A discloses a control apparatus for a laundry washing and/or drying machine which is adapted to identify the type of fabrics to be laundered or dried and to automatically select the most suitable program cycle for the laundering or drying of the laundry. The apparatus includes a digital counter (10) and a discharge element (2) connected in parallel to sensors (5, 6) for measuring the electrostatic charge of the laundry produced during rotation of the drum. The discharge element produces a sudden discharge of the electrostatic charge accumulated in the course of different periods of time, the lengths of which depend on the type of fabrics to be laundered or

[View Application Status](#)

Complete Specification

The present invention relates to a portable low tunnel polyhouse. More particularly, a portable low tunnel polyhouse for crop cultivation.

Background of the Invention

The construction and transfer processes of existing plastic low tunnels are labour-intensive and time-consuming and in addition it reduce the life span of cladding material i.e., low density polyethylene (LDPE). Plastic low tunnels are used currently, but there is lacking of self assembling, dismantling, re-construction facilities and also no facilities for misting and drip irrigation.

US20060162247A1 discloses a polytunnel system comprises a plurality of cover support members (14), a series of leg members (12) and a cover. The cover support members (14) are supported by associated ones of the leg members (12). The cover support members (14) are securable to the leg members (12) at a plurality of different heights.

US20180310491A1 discloses a crop protection system having a cover for protecting a crop or crop producing plants; a plurality of cover support arms for supporting the cover such that a periphery of the cover is depends downwardly from the cover support arms; a plurality of supports for supporting the respective cover support arms; and a plurality of cover holders configured to hold the periphery of the cover away from the supports. The cover, when deployed, curtains at least in part the crop or crop producing plants.

US7637053B1 discloses a crop protection device that is designed to cover a number of citrus fruit trees during periods of cold weather. The device is a heated canopy system that is made from a lightweight, high strength fabric that is supported by a number of ground-mounted frame members. The ends of the fabric are attached to one

Abstract:

The present invention relates to an electro-mechanical front brake indication system provided with a variable resistor switch that helps in controlling the level of brightness and it can be assembled in any kind of vehicle. According to the present invention, the proposed system works on the principle of a variable resistor circuit which controls the amount of voltage supply to the Red light attached at the front of any vehicle and that the light indication should also be present in front of vehicles as it greatly reduces the chances of accidents. The variable resistor is the series of resistors attached to the circumference of the sliding hub where the mechanical actuator is sliding, completing the circuit, and changing it according to the amount or pressure applied to the brake. The more the pressure, the less will be the resistor and the amount of voltage supplied to the light will be more, making it glow brighter.

Complete Specification

The present invention relates to an electro-mechanical front brake indication system provided with a variable resistor switch that helps in controlling the level of brightness and it can be assembled in any kind of vehicle.

BACKGROUND OF THE INVENTION

"Many times, while driving, in a scenario when someone on a one-lane road, tries to approach from the opposite side, the driver of the first vehicle has an uncertainty towards whether the person on the other side is trying to apply the brake or not, and often such uncertainty leads to disastrous road accidents making it difficult for people to come-out safe from this situation. Also, often it has been seen that when overtaking a slow-moving truck, at times another vehicle like a car approaches and might ignore the indicator of the first overtaking car resulting in increasing speed, rather than slowing down of second car allowing to overtake successfully leading to an accident. To further overcome the drawbacks of prior art the present disclosure addresses to add a device that can change the brightness of the front brake indicator according to the force exerted by the driver on the brake. This device will allow one to know about the action of the driver coming from the front and hence everyone can deal with the uncertainty, of whether to pull the brake or not.

OBJECTIVE OF THE INVENTION

The present invention has been developed in response to the present state of the art, and in particular, in response to the problems and needs in the art that have not yet been fully solved by currently available techniques and processes.

Abstract:
 Accordingly the present invention discloses an embedded system specially designed is an amalgamation of mobile and edge computing devices that can detect an image as fake or real, image through deep neural network utilizing CNN architecture, that provides an advantage of being reliable, handy, cost-efficient system.

Complete Specification

Claims:We claim:

1. An embedded system for fake image detection, comprising;
 - a) a processing unit connecting various peripherals of the system and configured to process the image through deep neural network utilizing CNN architecture;
 - b) an input module defined as one peripheral connected to the processing unit to capture the image;
 - c) a central server defined as second peripherals configured with the processing unit to retrieve fake image in case image is already in database and if not in data base store the new image after processing through processing unit; and
 - d) a display device defined as third peripheral connected to processing unit to display the tempered image.
2. The embedded system for fake image detection as claimed in claim 1, wherein the processing unit is raspberry-Pi
3. The embedded system for fake image detection as claimed in claim 1, wherein the input module is camera sensor with flash.
4. The embedded system for fake image detection as claimed in claim 1 wherein the displav device is touch screen displav compatible with processing unit

Abstract:
 ABSTRACT "AN IMPROVED STRENGTH AND OPTIMIZED WATER ABSORPTION CAPACITY CONCRETE BACILLUS MEGATERIUM (CBM)" The present invention relates to concrete mix of grade M30 comprising ordinary Portland cement 43 (OPC 43) grade cement, coarse aggregates, fine aggregate natural sand of zone-III, Bacillus megaterium of cell density 108 cell/ml and polycarboxylic ether based super plasticizer, which have high compressive strength, split tensile strength, flexure strength and decreased water absorption and is crack resistant.

Complete Specification

Field of the Invention:

The present invention relates to the field of mechanical engineering. Most particularly to improving the mechanical strength of concrete to render in crack-free.

Background of the Invention:

Concrete is the most useful material in the construction industry to build the road pavement, commercial buildings, residential building and bridges. Development of minor cracks into major cracks in the concrete structures gets exaggerated due to the less tensile strength and reduced durability. This is due to the presence of voids and increased permeability of cement concrete that reduces the durability and strength of the concrete.

Concrete cracks are common occurrence, these concrete cracks are unavoidable and are taken into account considering the safety of the modern buildings. The deterioration process in the concrete depends on the ability of concrete to withstand weathering action, chemical attack, or any process of deterioration. A low permeability of concrete mixture is one of the key factor to concrete durability. Similarly, water-cement ratio, use of admixtures, curing, air voids due to deficient compaction, micro-cracks due to loading, cyclic exposure to thermal variations, and age of concrete also effects the crack formation in concrete. The permeability of cement

Abstract:
 The present subject matter relates to hepatoprotective herbal formulation. Hepatoprotective herbal formulation comprises Aegle marmelos, Vitis vinifera and pharmaceutically acceptable excipients. Further the present subject matter relates to the method of preparation of herbal formulation used as hepatoprotective agent. Advantages of the present invention include improved patient compliance and reduced side effects.

Complete Specification

The present invention relates to a hepatoprotective herbal formulation. Particularly the present invention relates to a herbal formulation comprising Aegle marmelos, Vitis vinifera and pharmaceutically acceptable excipients. Further the present invention relates to the method of preparation of herbal formulation used as hepatoprotective agent.

Background of Invention

Liver disease is known to be the one of the most popular cause of illness and death which affects the person or patient of all ages. The common liver diseases are hepatitis, alcoholic liver diseases, fatty liver disease, liver cirrhosis and drug/chemical mediated hepatic injuries.

S Vinodhini et. al; (2007) evaluated the hepatoprotective effect of Aegle marmelos against alcohol induced liver injury in albino rats in twenty four rats by dividing them in four equal groups of six rats at a dose of 1g/Kg for 21 days and indicate that Aegle marmelos leaves have excellent hepatoprotective effect when compared to standard herbal drug silymarin.

D Caroline et. al; (2008) reported that intake of purple grape juice as a hepatoprotective agent in Wistar Rats.

Abstract:

The present invention disclose an arthritic composition *Sesbania grandiflora* and MMP-3 inhibitor that significantly decrease the arthritic index.

Complete Specification

The present invention is related in general to the field of dietary supplements and therapeutic compounds. In particular, the present invention relates to formulations comprising herbal extracts for the amelioration of arthritis and for the alleviation of inflammation and pain associated with arthritis.

BACKGROUND OF THE INVENTION

Arthritis is a disease affecting the musculoskeletal system, particularly the joints. It is not a single disease but actually an umbrella term for over 100 medical conditions where the joints are affected. According to the Arthritis Foundation, arthritis afflicts more than 70 million adults and 300,000 children in the United States alone.

One form of arthritis is rheumatoid arthritis (RA). RA is a systemic disease that affects the entire body and is one of the most common forms of arthritis. RA is a chronic inflammatory and destructive joint disease that affects 0.5~1.0% of the population in the industrialized world and commonly leads to significant disability and a consequent reduction in quality of life. It is two to three times more frequent in women than in men and can start at any age, with a peak incidence between the fourth and sixth decades of life. RA is associated with high costs and, if not treated appropriately can result in reduction of life expectancy. In addition to the joint swelling and pain caused by the inflammatory process, extra-articular involvement, which ranges from rheumatoid nodules to life threatening vasculitis, is a characteristic of RA. The ultimate hallmark of RA is joint destruction.

Abstract:
 The present invention provides an E-Waste Based I Dumble Shaped Interlocking Paver Blocks that are made by mixing fine aggregates, cement, fly ash and water and the E-waste grounded upto a size of less than 10 mm to replace the fine aggregate upto 50%. Rest all the ingredients like cement, fly ash and water used will be the same. The E-Waste Based I Dumble Shaped Interlocking Paver Blocks of the invention show improved or similar compressive strength and reduced the cost of the paver blocks up to 10% due to the reduction of the fine aggregate content. Also, the E-waste used improves the tensile strength of the paver blocks making them more durable during impact loading.

Complete Specification

The present invention relates to an E-Waste-based interlocking paver block by grinding E-waste up to a size of less than 10 mm and using it in the regular paver mixture of fine aggregates, cement, fly ash, and water to make a paver block.

BACKGROUND OF THE INVENTION

India has the label of being the second-largest e-waste generator in Asia. According to a MAIT – GTZ estimate, 83 India generated 330,000 lakh tonnes of e-waste, which is equivalent to 110 million laptops. More than 90 percent of the e-waste generated in the country ends up in the unorganized market for recycling and disposal. From this huge percentage of waste generation, only 17.4% of waste is recycled for further uses, and rest remain dumped. Moradabad, in Uttar Pradesh, on the banks of the Ramganga River, has become one of the biggest informal e-waste recycling hubs in India. Popularly known as the Brass City of India, the global recession and consequent decrease in demand for brass products; manufacturers and handicraft workers are shifting towards the informal, unauthorized e-waste sector. The e-waste in Moradabad comes from all the metro cities, majorly from New Delhi (Shastri Park, Silampur, Mundka and Mandoli), Mumbai, Kolkata, Bangalore and Chennai. According to an estimate, 50 percent of the PCBs used in appliances in India end up in Moradabad. Recyclers process them to recover metals, including copper, aluminium, gold, and silver. Workers can easily be seen on the banks of the Ramganga, washing the boards to recover a fragment of metals. The Metal Recovery Process is being conducted in 4 cycles respectively Segregation, Open burning, grinding washing, and acid bath. The burnt e-waste has been ground in ball mills and obtained as powdered material having a size range of less than 4.75mm. This process of dismantling involves environmental hazards and impacts ill effects on human life as well aquatic life.

Abstract:
 The present invention discloses a smart water tap that comprises of a tap (1), a microcontroller (2), a servo motor (3), a lithium battery (4), a 3-phase rectifier (5), a hydro generator (6), a ultra sonic sensor (7), and a bucket (8). The present water tap automatically closes the water tap (1) by reading the value of water height in the bucket (8) and generates the electricity on its own by attaching the 3.3V hydro generator (6) to the inlet of the tap (1) and does not need any external means for charging.

[Complete Specification](#)

The present invention relates to a smart water tap. More particularly, the smart water tap that automatically closes the water tap and also generate electricity.

Background of the Invention
 It is quite often that people forget to close the water tap while filling a bucket and leave the area, this leads in the wastage of valuable water, and this is a very common mistake in the society.
 CN205155300U discloses a water -saving intelligent tap, including the tap body be provided with inlet tube and outlet pipe on the tap body respectively, this internal water flow control system that still is provided with of tap, the water flow control system includes that controller, infrared ranging are from sensor and solenoid valve, the solenoid valve sets up between inlet tube and outlet pipe, and the controller then links from sensor, solenoid valve ferroelectric phase with infrared ranging respectively. This practicality is provided with infrared ranging and leaves the sensor, and the distance of accessible infra -red detection target object is far and near, carries out the control of water yield size according to the distance of target object is far and near through controller manipulation solenoid valve again to realized that the user can need according to self and then adjust water yield size, very the waste of water resource also can effectively be avoided to the convenience.
 CN203067922U discloses a water-saving water faucet which comprises a water faucet. A side through opening is formed on a water inlet pipe of the water faucet. The side through opening is communicated with a water-consuming system through a valve. The water-saving water faucet is simple in structure and is capable of effectively utilizing released water before reaching use requirements and is beneficial for environmental protection and has extensive application values.
 WO2012001683A3 discloses a system for saving cold water retained in a hot water line is provided, comprising: a) a reservoir for collecting cold water, with means for

Abstract:

The present invention discloses an inertia based power generation plate comprises of a body (1), tray (2), copper coils (3), permanent magnet (4), shock absorbers (5), springs (6) and some wires (7); the power generation plate is a slim tray type structure that is placed in large cargo vehicles on which the transported goods are placed.

Abstract:
 Accordingly, the present invention discloses a system for warehouse management through input sensing device; processing of data received from input sensing devices and maintaining the environment for quality of item to be stored. The present invention has an advantage of maintaining proper environment for seasonal demand, damage control from insects, security enhancement for unauthorised entry, and constant power supply.

[Complete Specification](#)

Claims:We claim:

1. A smart warehouse management system (100), comprising:
 - a) Plurality of input sensing device (101) to sense the parameter affecting the said warehouse environment;
 - b) a processor (102) configured to receive input signals from the plurality of input unit and generate output signal in response of said input unit;
 - c) a transmitting module (103) connected parallelly with the processor to send the received input to user over phone;
 - d) an output unit (104) receiving output signal from processor via relay connected between said output unit and processor; and
 - e) power supply (105) unit.
2. The smart warehouse management system (100) as claimed in claim 1, wherein the one input sensing device (101) is PIR sensor, LDR sensor, Gas Sensor, Temperature sensor, Humidity sensor, Insect Killer.
3. The smart warehouse management system (100) as claimed in claim 1, wherein the processor (102) is Raspberry-pi.
4. The smart warehouse management system (100) as claimed in claim 1 wherein the transmitting module (103) is ESP01 Wi-Fi module

Abstract:

The main objective of the present invention is to describe a method for determining lethal dose (LD50). Another objective of the present invention is describe a method for determining accurate and fixed LD50 value instead of range of values that utilizes less number of animals and gives accurate results. The present invention gives results even when there is no mortality. The method also provides accurate result by using few numbers of animals.

Complete Specification

The present invention relates to a method for determining lethal dose (LD50). Particularly the present invention relates to a method for determining LD50 by utilizing less number of animals. Further the present invention relates to a method for determining fixed LD50 value with improved accuracy. Further the present invention relates to a field of toxicity.

Background of Invention

Toxicity test examine toxic effects when a chemical is absorbed into the body, via mouth, skin, lungs. The most common test of acute (short-term) toxicity is the LD50 test. Many different substances are tested in this way, including all drugs, agricultural chemicals and cleaners.

Lethal dose is an indication of the lethal toxicity of a given substance or type of radiation. Because resistance varies from one individual to another, the "lethal dose" represents a dose at which a given percentage of subjects will die.

LD50 means if we administer any dose of drug to animal group for experimental purpose for the estimation of therapeutic effectiveness of that drug, and if 50% of animal get died than it means that particular dose of drug is lethal dose 50 (LD50).

Abstract:
 The present invention discloses a dumpster with smart waste segregation system that bifurcate the decomposable (biodegradable) and non-decomposable waste product in other compartments. In the present invention, A1 is chamber 3 that collects the light dust particles (like mud, etc.) the box contains, A2 is chamber 2 that collects the non-recyclable trash and A3 is chamber 1 that collects the recyclable trash. Inside the box, two plates (6, 7) are having sensor (2) and other required tools, where the first plate (6) consists of single plate with image sensor (2) and vacuum plate (8) and second plate (7) is a simple with see-saw mechanism.

Complete Specification

The present invention relates to a waste segregation system. More particularly, the dumpster with smart waste segregation system.

Background of the Invention

Even in the present era, we saw different spaces in cities which are used for trash collection. The Trash is kept in open places which is one of major cause for different infections and diseases. It is to be realized that nobody has focus on dump yards in different cities on roadsides. Also, when mixed trash/garbage threw in to bin or any side, then it is not useful for further application like in agriculture biodegradable can be use as fertilizer but not use as mixed form.

WO2014079586A1 discloses a waste collection system (10) that includes one or more waste containers (20) for receiving waste (50), a server system (100) for receiving one or more signals via a wireless communication network (70) from sensor arrangements (30, 40) included on the one or more waste containers (20) for sensing a waste status of the one or more containers (20). Beneficially, the server system (100) is operable from receiving the one or more signals to compute an optimal strategy for one or more waste collection vehicles (150) to collect waste from the one or more waste containers (20). The waste collection system (10) is capable of supporting a competitive bidding arrangement for implementing collection of waste (50) for the one or more waste containers (20).

US20170116668A1 discloses a management system for use with a vehicle configured to receive waste from a receptacle. The management system may have at least one sensor mountable onboard the vehicle and configured to generate a receptacle-specific signal indicative of a condition of the receptacle. The management system may also have a controller in communication with the at least one sensor. The controller may be configured to receive information that is non-specific to the receptacle, to anticipate

Abstract:

ABSTRACT METHOD OF ISOLATION OF MUCILAGE FROM PHANERA VARIEGATA LEAVES The present invention relates to a method of isolation and characterization of mucilage from Phanera variegata leaves. Further it relates to use of Phanera variegata leaves mucilage as an excipients in modified drug delivery system as well as sustained and prolonged drug delivery in varying concentrations. Results obtained from studies showed that the mucilage isolated is suitable for modified drug delivery system, sustained, prolonged and control drug delivery system and as an alternative natural binder as well as useful excipient in liquid dosage forms Phanera variegata mucilage is characterized as natural, non-toxic and biodegradable.

Abstract:
 The present invention A gel loaded apremilast nanoparticles formulation comprising 100-200 mg of Eudragit RSPO and 1.0-2.0% w/v Poly Vinyl Alcohol against Rheumatoid Arthritis, wherein formulation is characterized as particle size 119 nm, 80.8 %EE (Entrapment efficiency), 27.54 %DL (Drug loading), 37.5 ± 1.7 °C gelation temperature, 55 ± 1.0 second gelation time and 866 ± 13 cps viscosity.

Complete Specification

The present invention relates to the slow controlled release pharmaceutical formulation art. More particularly, the invention relates to formulation of injectable in-situ gel loaded with Apremilast nanoparticles for the treatment of rheumatoid arthritis.

BACKGROUND:

Rheumatoid arthritis is a progressive, systemic autoimmune disease characterized by synovitis that damages diarthroidal joints and is accompanied by fatigue, anemia, and osteopenia. Rheumatoid arthritis has a prevalence of 0.5% to 1.0% and a peak incidence between 40 and 60 years of age and affects primarily women. The cause of RA is not known; however, certain histocompatibility antigens are associated with poorer outcomes. Nonsteroidal anti-inflammatory drugs (NSAIDs) provide only symptomatic relief. Disease-modifying antirheumatic drugs (DMARDs), the cornerstone of RA treatment throughout all stages of the disease, maintain or improve physical function and retard radiographic joint damage. More recently, biological compounds that target tumor necrosis factor alpha (TNF-α), B-cells, or T-cells have been used successfully to treat RA, but 30% to 40% of patients fail to respond to these therapies.

The joints that make up the body joints are called synovial joints, and each synovial joint generally includes the opposite ends of two adjacent bones. The bone ends are encased in cartilage tissue, the entire joint area is encased in a protective soft tissue called the synovium, and the synovium contains the synovial membrane. The synovium produces lubricious synovial fluid and releases it into the joint space within the joint. In normal joints, the amount of synovial fluid is quite small. In addition to its lubricating

Abstract:

The present invention relates to an emergency window converted into ladder to allowing escape from a multistorey building. The emergency window comprises a frame having a first end and a second end, wherein the first end and the second end of the frame configured with a multistorey building window. The emergency window further comprises a collapsible vertical connecting member align in between the first end and the second end to the frame, wherein the vertical connecting member having a plurality of slats. The vertical connecting member may be extended in the operational position allowing the slats to extend down through the frame and out to the first end to the second end. The emergency window further comprises an emergency switch.

Abstract:

The present invention relates to a mini refrigerator (100) for cooling things in automobile. The mini refrigerator (100) comprising a housing. The housing comprises a compressor (132), a refrigerator condenser(106), an expansion valve(134), an evaporator (122) and a motor that sequentially circulates them to operate a refrigeration cycle. The mini refrigerator (100) further comprising a power supply unit and the power supply unit supply power to the motor. The mini refrigerator (100) further comprising a power converter that inputs power using the battery as a power source. The mini refrigerator (100) further comprising a natural gas supply unit for vaporizing liquefied natural gas is provided in the refrigerant circuit. The mini refrigerator (100) further comprising a controller that controls at least one operation of the refrigeration cycle. The mini refrigerator (100) further comprising the compressor (132) sends high-pressure vapour refrigerant to the condenser (106) and the condenser (106) sends to expansion valve(134). The mini refrigerator further comprising an exhaust fan or blower (118).

Complete Specification

The present invention relates to a mini refrigerator for cooling things in automobile. Most particularly it is a refrigerator which is converting the function of AC to make a refrigerator for cooling things in automobile.

Background of the Invention:

In modern life all automobile users love to visit any places and supermarkets by their vehicles from time to time, and there is not always the ability to carrying food stuff during travelling or taking food items such as beverage, fruits, vegetable etc. from supermarkets immediately bring to home. Someone may get into a traffic jam, someone may have pressing matters after the market, etc.

Generally, refrigeration, preserving food was a big job during travelling from one place to another. To stay stocked with the essentials, during travelling is a big deal for any automobile users any had to work at it or be rolling in money. The invention of the refrigeration is one of the big inventions that changed the way to conduct our daily lives. The preservation of food more easily nowadays, so much less to worry about when it comes to food-borne illnesses. The food supply is more stable, too.

At present, used automobile known to the public, all do not have the device that utilizes air conditioning for automobiles storage drink and food itself, the still inconvenient diet of person by bus of driver no matter, especially severe is to need to drink more water during the broiling summer, especially need to drink cold drink and reduce body temperature. be difficult to keep the human body normal physiological function like this

Abstract:

The present invention consists of a wired earphone with a 3.5 mm connector and a 3.5 mm jack same as in the smartphone/media device. It can be used as single earphone for a single user while the additional 3.5 mm jack of this inventions allows one more user to connect his earphone to this earphone and both the user can have same experience of listening sound/audio from a same source. It also reduces the number of junctions between the source and the users. There will same number of junctions between the source and the users. It will enhance the listening experience of multiple users and reduce the energy consumption as compare to currently available devices. The present invention reduces the need of extra accessories like these dual headphone adapter or earphone/headphone Y splitter cable. Since the source will be one, the consumption of internet data will also be reduced which will save the expense of two students attending online lectures/videos. The present invention will benefit to all the people who usually listen music or watch videos together and the people who cannot afford separate devices for their children to attend online classes.

Complete Specification

The present invention relates to an earphone with an inbuilt Y-Splitter. More particularly, the present invention helps to add features to earphones to permit persons to share the audio among multiple earphones.

BACKGROUND OF THE INVENTION

COVID-19 pandemic has made a huge impact on the education system. To prevent the spread of COVID, government of India forced lockdown all over the country. All the educational institutes including schools, colleges, universities and coaching centres were shut down as per government orders. Due to this, a major change was observed in the whole education system. The mode of delivery of class lectures was shifted from offline mode to online mode by using computer/smartphone through various video conferencing platforms including mobile apps and websites such as Zoom, Google meet, Microsoft teams etc. In online classes, smartphone or computer is essential but to enhance efficiency and experience of online teaching-learning, some accessories like mic, webcam, headphone, earphone etc. are used. The use of earphone/headphone enables a teacher to deliver the class lecture more effectively because it enhances the quality of sound and reduces the noise from surrounding environment. In case of student, the use of earphone with smartphone/computer enables him attending the class with more focus without any disturbances for surrounding environment. An earphone/headphone can be connected to a single device at a time and is meant for a single user. It means that at a time only a single student can watch the video lecture and if two or more students want to watch a video lecture then they either have to switch to loud speaker or they need separate devices to watch the video lectures. Due to lockdown, people faced financial situation. Rich families could afford separate devices for online classes while poor families could not afford separate devices for their children. And this situation was very tough for the people who lost their job in lockdown. They could not afford even a single device for their children.

Abstract:

The present invention is laminated anti-microbial reinforced panels that are made by using cementitious materials like cement, coarse aggregate, fine aggregate. The configured proposed sections are capable to provide anti-microbial properties as it has a thin coating of epoxy over the open top and side surfaces. The laminated anti-microbial reinforced panels with higher mechanical strength and excellent resistance against physical damages. The prolonged life span of the panels can be useful for sustaining high quality and serviceability. The laminated anti-microbial reinforced panels that are prefabricated drain panels and enhance the capacity of the panels to retain water and lower water from seeping. The panels are coated with epoxy making this drainage microbial (fungi, Bacteria) and algal growth resistant.

Complete Specification

The present invention relates to the construction sector, and discloses the laminated anti-microbial reinforced panels developed by using cementitious materials like cement, coarse aggregate, fine aggregate.

BACKGROUND OF THE INVENTION

Removal of waste water is a critical intervention for healthy life of structural systems. The waste water that comes through as a consequence of chemical treatment should be properly drained off in drainage system. There are various systems employed for safe discharge of water/wastewater. Currently, street drainage systems consist of brick masonry that has been coated with cement mortar paste above it that permitting water to soak through the bottom level. The continuous contact of the water with the surrounding surface causes the growth of the algal species and pathogenic bacteria. The seeping of the water deteriorates the adjoining structure, causing structural collapse, surface erosion, and depression. However, a range of structural components, such as prefabricated cylinder pipes, culverts, and sewage systems, are available to supply large flood discharge to reservoirs or basins. Furthermore, such options are most suited for liquid from rain, domestic and industrial waste discharge. The prefabricated draining sections that are presently available are intended for discharge of water from the open drainage system. Eventually, the presence of high organic content (sewage, plant and animal waste etc) in such discharging units leads to the growth of a vast range of organism from microbes (fungi, bacteria and microalgae) to plants like Utricularia. These growths are responsible for the problems like clogging which ultimately increase the pressure on the walls of drainage panel and reduce the life span of any drainage by forming the cracks, rupture, fissures, erosion produce due to the stress generate by this pressure. These cracks provide sites for the growth of the organism. Once the sites are developed through the cracks, there will eventually be a high affinity of the algal growth which consistently imposes the pressure on the

Abstract:

The present invention relates to a device has a special type of conductive film placed around the inner surface of tyre. When the vehicle is moving and comes in contact of any tyre piercing and puncture causing nail, then a pulse signal is generated which is received by our own designed electronic circuit which processes the signal to blow a buzzer which indicates that tyre has been punctured. The driver or rider is instantly aware of the puncture and gets it fixed to avoid any kind of inconvenience.

Complete Specification

The present invention relates to a smart tyre puncture alert system that instantly alerts the driver by a medium of a piezo-buzzer, that the tyre is got punctured and needs to be fixed as soon as possible so that the driver can avoid inconvenience during rides.

BACKGROUND OF THE INVENTION

A Tire Pressure Monitoring System, or TPMS, can perform real-time monitoring of tire pressure, and provide a warning for a low tire pressure or an overly high tire pressure. TPMS includes direct TPMS and indirect TPMS. In indirect TPMS, tire speed changes are monitored through monitoring tire deformations (wheel rotating diameter). Then tire deformations are described by tire pressure variations. Indirect TPMS, pressure sensors monitor tire pressures directly. Tire deformations are kept under their limits through tire pressures controls. The ultimate goal for direct TPMS and indirect TPMS is to monitor tire deformations and keep them under limits. Tire pressure is an intermediate variable that describes tire deformation. Based on the current TPMS standards (FMVSS 133, GB/T 26149 and et. al.), TPMS should provide the real-time tire pressure and warning by means of sound or light when real-time tire pressure is below 75% of cold tire pressure or above 125% of it. The purpose of designing TPMS is to inform people to adjust tire pressures by providing tire pressure abnormal warning, so that crashes related to tire failure could be avoided. According to the technical report on TPMS effectiveness evaluation by NHTSA in November 2012, the presence of TPMS on a vehicle is estimated to result in a 55.6 percent reduction in the likelihood that the vehicle will have one or more severely underinflated tires (25% or more below the vehicle manufacturer's recommended cold tire pressure). However, it is difficult to evaluate the reduction of tire failure and crashes. That is to say, TPMS is not effective at preventing tire failures and crashes.

Prior arts including US20150061852A1 provide an improved method for a passenger car tire pressure monitoring system (TPMS) including improvements of a direct TPMS

Abstract:

ABSTRACT FABRICATION & EFFICIENCY ENHANCEMENT OF REFRIGERATION SYSTEM BY USING ACCUMULATOR & RECTIFIER PLATFORM The present invention discloses liquidified petroleum gas refrigeration system and method of employing the liquidified petroleum gas for use as refrigerant that is non-polluting, economical, zero ozone depletion potential (ODP). The system also obliterates the need to use electricity to refrigeration.

Abstract:

The present invention relates to the Ignition control system using alcoholic driver condition. In this invention we use Arduino uno for the controlling of the whole system. Alcohol sensor detects the alcohol and send the signal to arduino board then arduino controller operate the relay module to stop the ignition of engine. The system requires push button to start the engine. If alcohol is detected by the sensor at the time of starting the engine, the system will block the engine and it will fail to start and if alcohol is detected after starting of the engine then also the system will lock the engine and the vehicle stops.

Complete Specification

The present invention relates to the Ignition control system using alcoholic driver condition. In this invention we use Arduino uno for the controlling of the whole system. Alcohol sensor detects the alcohol and send the signal to arduino board then arduino controller operate the relay module to stop the ignition of engine.

BACKGROUND OF INVENTION

According to the current situation, drunk driving is the cause of the majority of road accidents. Drivers who drink alcohol are not in a stable state, and as a result, rash driving occurs on highways, endangering the lives of everyone on the road, including the driver. The magnitude of unsafe driving knows no bounds. In India, the law now prohibits drivers from drinking and driving so that the fee can deter people from doing so. Effective surveillance of inebriated drivers, on the other hand, may provide a problem to police officers and road safety officers. This is due to citizens' inherent incapacity to be present in the same place at the same time. The ability of law enforcement officers has been hampered as a result of this limitation.

The Indian Ministry of Statistics reported thousands of traffic accidents in current years. Despite the fact that the research said that speeding is the leading cause of these accidents, it is safe to assume that practically all of the occurrences are due to the drivers' unstable condition, which is caused by them getting intoxicated before driving. According to a study conducted by the World Health Organization, drink-driving is responsible for 50 percent to 60 percent of road accidents. Moreover, WHO information on road traffic deaths disclosed

In current years, there were million traffic deaths worldwide, with low- and middle-income countries having higher fatality rates per 100K population (24.1 percent and 18.4 percent respectively). Data collected revealed that several economic vehicle drivers admitted to drink alcohol during their working days. This demonstrates that practically

Abstract:

The present invention relates to a system (100) for improving a performance of drowsiness and fatigue detection of a drivers of a vehicle. The system (100) comprising a sensor (114) for sensing a condition of the driver's behaviours at a plurality of activities. The system (100) further comprising one or more processors(116). The system (100) further comprising a memory (118) for storing a set of the driver's behaviours configured the one or more processors (116) to perform sensing by:determine changes in the behaviours of the driver's facial activity and physiological activity between the plurality of the activities; evaluate whether the changes in the behaviour's activity of the driver's facial and physiological activity between the plurality of the activities exhibit at least one of a periodic and a quasi-periodic pattern, normalize the results of the analysing function, and perform a point for detection on the normalized results to identify a change in the facial and physiological activity of the driver. The system further comprising an alarm (212) for alerting the driver.

Complete Specification

The present invention relates to a system for improving a performance of drowsiness and fatigue detection of a drivers of a vehicle. Most particularly it is a system, and a method for detecting whether a driver of a vehicle is impaired, for example by drowsiness andfatigue.

Background of the Invention:

Generally, each year numerous automotive accidents and fatalities occur as a result of sleepy individuals falling asleep while driving. It has been observed that these drivers exhibit certain physiological patterns that are predictable and detectible. The classic "head bobbing" motion, where the driver's head drops and then quickly pulls back upward is one of the patterns that is often exhibited when an individual is becoming drowsy while seated in an upright position. Additionally, a drop-in heart rate may also indicate the presence of a drowsy driver.

If a driver of a vehicle becomes sleepy or is impaired in other ways, this can adversely affect driving performance.Over 50 million people are injured globally per year due to road crashes and approximately 1.35 million people died globally per year due to road accidents. Fatigue and micro sleep while driving is the cause of serious accidents. Literature research of the existing safety system reflects three measures: vehicle-based measures, behavioural measures and physiological measures.

Several known drowsiness detection systems use CCD cameras or other optical sensors to detect an image of the driver's face in order to analyze eyelid movements for

Abstract:

The main objective of the present invention is to prepare a mesalamine loaded microsponges formulation. Present invention discloses an immunosuppressive medicine which treats inflammatory bowel disease by decreasing prostaglandin production and blocking cyclooxygenase. Further it also discloses a mesalamine loaded microsponges formulation which is given orally and acts at colon to reduce inflammation for targeted drug delivery. Furthermore, present invention also ensure improved surface area to facilitate the quick oral absorption of poorly soluble drugs.

Complete Specification

The present invention relates to a mesalamine loaded microsponges formulation. Most particularly it relates to an immunosuppressive medicine which treats inflammatory bowel disease by decreasing prostaglandin production and blocking cyclooxygenase. Further it relates to a mesalamine loaded microsponges formulation which is given orally and acts at colon to reduce inflammation.

Background of the Invention:

The transit of intact formulation through the stomach and small intestine, as well as the release of the proper amount of medicine in the colon is essential for a drug used to treat colon illnesses. To achieve minimum therapeutic efficacy, the drug must be supplied to the patient in an adequate dosage and for a certain period of time with the least number of side effects and toxicity possible. The term "targeted drug delivery" refers to the selective and effective localisation of the pharmacologically active component at specific locations. Therapy for gastrointestinal disorders poses genuine formulation issues for target drug distribution. The underlying premise is based on changes in pH and metabolic activity across different regions of the gastrointestinal system.

The key prerequisite for a formulation to function as an effective colon drug delivery system is that just a minimal amount of drug should be released in the upper GI tract environment, i.e. the stomach and small intestine. As a result, in order for a dosage form to be effective as a colon drug delivery system drug release had to be delayed under upper GI situations.

Abstract:
 The present invention the LPG gas heater device (1) for room heating comprises of LPG gas cylinder (2), control valve (3), LPG gas burner (4), reflector surface (5), and water flow rate control valve (6). Further, in the present invention, the reflector surface (5) reflects the heat emitted by the burning of LPG in the burner (4) and collects and focuses the heat radiated from the burner (4).

Complete Specification

Description: LPG GAS HEATER DEVICE

Field of Invention

The present invention relates to a gas heater. More particularly, LPG gas heater device for room heating.

Background of the Invention

In winter season, it is require heating the living space so that the one can feel comfortable. The heating can be done by using common electric resistance heater or an electric heat pump. But using this method requires the availability of electric power which is costly and also may be unavailable in remote and village areas as well. The other method of heating is to burn the coal or woods but this cannot be done inside the living space because of smoke and unhealthy environment produced due to burning of these fuels.

CN2064454U discloses a remainder heaters for domestic LPG cylinder, which is composed of an electric heater, a bracket and a weight-measuring indicator installed between the electric heater and the bracket. The utility model can directly measure out whether the inner of the liquefied petroleum gas cylinder used having remainder, so as to prevent the danger occurring caused by the pressure limiting valve is blocked and mistaken heating the heavy cylinder still having combustible gas inside. The electric heater can heat the remainder in the cylinder to 36-40 DEG C to cause the remainder in the cylinder to be gasified and burnt fully. The utility model has the advantages of simple structure, low cost and convenient use, and is an energy-saving device which can cause the remainder in the liquefied petroleum gas cylinder to be gasified and burnt fully

Abstract:

The present invention relates to herbal formulation for osteoporosis. Particularly it relates to herbal ethosomal gel formulation for osteoporosis. Further is relates to a method for preparing herbal ethosomal gel formulation. Herbal formulation is prepared with biodegradable and biocompatible components. It shows a capability to efficiently encapsulate a wide variety of drug molecules including water-soluble, lipophilic, amphiphilic and high molecular-weight compounds. Herbal ethosomal gel formulation ensures improved skin permeation of drug molecules for both dermal and transdermal delivery.

Complete Specification

The present invention relates to herbal formulation for osteoporosis. Particularly it relates to herbal ethosomal gel formulation for osteoporosis. Further is relates to a method for preparing herbal ethosomal gel formulation.

BACKGROUND OF THE INVENTION:

Ethosomes express themselves as an excellent carrier for dermal delivery. It has been reported that ethosomes provide constant permeability of skin and increased drug permeability through lipid vesicle due to significant content of ethanol in its composition.

US20210030640A1 discloses method of preparing a bioactive substance-encapsulated ethosome, the method including: preparing an aqueous solution of a bioactive substance, preparing a lipid-dissolved solution by dissolving lipids in ethanol, preparing a hydrated liquid crystalline phase by hydrating the lipid-dissolved solution by mixing and agitating the bioactive substance aqueous solution together with the lipid-dissolved solution, and preparing an ethosome solution by adding purified water to the hydrated liquid crystalline phase to produce a mixture and agitating the mixture.

Many methods have been reported in past but a simple method of preparation of ethosomes is required. Further an ethosomal gel formulation is required with improved dermal and transdermal delivery. Further a method of preparation of ethosomal gel is required which utilizes biodegradable and biocompatible components.

Abstract:
 The present invention relates to a biodegradable packaging film. Particularly the present invention relates to safe packaging material for producing carry bags, trash bags etc. Further the present invention relates to a biodegradable packaging material for light to moderate weight materials. Method for preparing biodegradable film is disclosed. Biodegradable packaging film is suitable as wrapping material for light to moderately weighted non-food or non-pharmaceutical materials. Further it possess considerable mechanical properties, and protect the product from sunlight so suitable for light sensitive food product and pharmaceuticals.

Complete Specification

The present invention relates to a biodegradable packaging film. Particularly the present invention relates to safe packaging material for producing carry bags, trash bags etc. Further the present invention relates to a biodegradable packaging material for light to moderate weight materials.

Background of the Invention

The load of non-biodegradable plastic waste on earth is accumulating day by day. Plastic packaging materials derived from petroleum products have negative effects on both environment and the health of living beings. Plastic as a packaging material is of so much concern as it has invaded earth in a form of everyday needs. Saving Earth, environment, and health of living beings from the hazards associated with increasing plastic waste accumulation leads to the present invention.

In India "Ecoware" is the largest eco-friendly packaging company, manufacturing various sustainable and disposables cutleries (tablewares, spoons, cups, etc.) from the waste of common agricultural crops such as sugarcane and wheat. Envigreen Biotech India Private Ltd produces biodegradable substitutes for plastics, including trash bags, carry bags, etc. Products are made from natural starch & vegetable oil derivatives. PappcoGreenware is manufacturing takeaway boxes, plates, tableware, spoons, cups, etc. made from residual sugarcane.

Petronilho et al. developed hydrophobic starch-based films using potato washing slurries and spent frying oil. A starch-based film was produced by a single-step approach
