

## **Course: Master of Library & Information Science (MLISc)**

**System:** Semester

**Duration in Years:** 1

### **Programme Objectives (POs):**

The program is designed to prepare a skilled workforce capable of adapting to the rapidly evolving information environment. It focuses on meeting user needs while upholding professional values and principles, embracing innovative practices, and cultivating lifelong learning and proactive leadership in service.

Students of the Master of Library and Information Science (MLISc) program are expected to be equipped with:

PO1: To provide students with a comprehensive understanding of knowledge development patterns and their organization.

PO2: To equip students with advanced skills in information/knowledge gathering, processing, organization, and retrieval.

PO3: To develop students' capabilities in information/knowledge analysis, repackaging, and marketing.

PO4: To offer advanced practical training in ICT applications within the information environment, including library automation, digitization, networking, and communication systems.

PO5: To prepare students for the analysis, planning, and management of library and information center systems.

PO6: To foster an understanding of research methods and the activities of research organizations

### **Programme Specific Outcomes (PSOs)**

On completing Master of Library and Information Science Programme, students shall be able to understand following outcomes:

PSO1: Comprehensive understanding of the patterns of knowledge development and organization. They will be proficient in analyzing, structuring, and organizing information to facilitate access and use.

PSO2: Demonstrate advanced skills in information and knowledge gathering, processing, organization, and retrieval. They will effectively use advanced methodologies and technologies to manage both digital and traditional information resources.

PSO3: Capable of conducting detailed information analysis, repackaging, and marketing. They will know how to adapt information to different audiences and contexts, enhancing its value and usability.

PSO4: Possess advanced practical skills in ICT applications relevant to the information environment, including expertise in library automation, digitization, networking, and communication systems. They will be able to implement and manage cutting-edge information technology solutions.

PSO5: Prepared for strategic analysis, planning, and management of library and information center systems. They will be able to develop and execute strategic plans that address the needs of their organizations and stakeholders.

PSO6: Understanding of research methods applicable to library and information science. They will be equipped to engage in research activities and contribute to knowledge in the field, understanding the operations and needs of research organizations.

PSO7: To enhance the ability to manage digital content and resources effectively, including understanding copyright laws, digital rights management, and data curation.

PSO8: To develop critical thinking and problem-solving skills specific to library and information science, enabling graduates to address and resolve operational challenges innovatively and effectively.

PSO9: Develop, select, procure, administer, and preserve the information environment by understanding and analyzing user information-seeking behaviors.
